MUHAMMAD NUR SYAHMI BIN MOHD MOKHTAR

COMPUTER SCIENCE STUDENT CAREER OBJECTIVE

I am a dedicated Graduated Computer Science student with a strong passion for technology and problem-solving. I have utilized various programming languages during my study years and learned to develop innovative solutions through software development.

EDUCATION

Kolej Professional MARA, Beranang, Selangor

Diploma in Computer Sciences | July 2023 - July 2025

- CGPA: 3.91
- Awards: Dean's List for all semesters (6)

WORKING EXPERIENCE

Chef Kecik Sdn. Bhd.

April 2023 - May 2026

- Ensure customer satisfaction by providing excellent customer service to more than 100 customers per day.
- Navigate multiple responsibilities in a fast-paced environment by managing beverage preparation, order handling, and table service, leading to an improved daily operation efficiency.
- Develop strong teamwork and foster collaboration with staff from multiple departments to ensure excellent customer experience.

MyCes Sdn. Bhd.

August 2025 - January 2026

- Participated in full-stack web application development using Quasar Framework, Node.js, and related technologies to deliver scalable and user-friendly solutions.
- Conducted software testing to identify bugs, verify functionality, and ensure application reliability.
- Collaborated with development teams to design, develop, and maintain web applications while meeting project requirements and deadlines.
- Provided technical support and system maintenance, ensuring optimal performance and a positive user experience.

PROJECT

GAMING DATASET PREFERENCES

- Developed Exploratory Data Analysis (EDA) and Data Visualization on a gaming preferences dataset using R Studio.
- A data analysis project that explores and visualizes gamer preferences to uncover trends, patterns, and insights. It helps in understanding gaming behaviors and can be used to guide game development or marketing strategies.

TICKETING PLATFORM FOR E-SPORTS EVENTS

- Developed a ticketing platform by using Python Django that can manage user database and implemented HTML, CSS, and JavaScript for designing the website.
- A digital platform designed to handle ticket bookings for e-sports events. It allows users to browse available events, purchase tickets, and manage their reservations, streamlining the event registration process.

RELIGIOUS PROGRAM MANAGEMENT SYSTEM

- Designed and developed a Religious Program Management System to help using Python Django, HTML, CSS, JavaScript.
- A system developed to organize and manage religious events and programs. It enables administrators to schedule programs, manage participants, and keep track of event activities efficiently.

GYM WEBSITE

- Designed a gym website using HTML, CSS, JavaScript.
- A website that provides information about a gym's services, classes, and facilities. It also helps promote memberships and allows potential customers to learn more about what the gym offers.

MEAL FINDER APP

- Designed and developed a Meal Finder App to using HTML, CSS, JavaScript, Meal Finder API and Electron JS.
- An application that helps users discover meal ideas based on the ingredients they have. It provides recipe suggestions and promotes healthier and more convenient cooking habits.
